Profile

Game designer and developer working across multiplayer games, VR training and interactive simulations. Combines Unity/C# development with mechanics design, procedural learning flows and player feedback, alongside Unreal Engine C++/Blueprint prototyping. Professional experience at AMMACHI Labs spans healthcare training and legacy industrial simulation; independent team projects explore competitive gameplay and physical interactions.

Education

Bachelor of Technology in Electronics and Communication Engineering, 2021 – 2025
Amrita School of Engineering, Amrita Vishwa Vidyapeetham Kollam, India
First Class | CGPA: 6.98/10

Holy Trinity Anglo Indian International school, Class XII (ISC) 2020 – 2021
Percentage- 84.5 % Kollam, India

Holy Trinity Anglo Indian International school, Class X (ICSE) 2018 – 2019
Percentage- 75.6 % Kollam, India

Professional Experience

Game Developer and Designer, *AMMACHI Labs, Amrita Vishwa Vidyapeetham* 06/2025 – Present
Kollam, Kerala

- Design and develop Unity/C# experiences for CPR/AED, solar installation and vocational training, translating procedures into learner actions, progression rules and corrective feedback.
- Build guided and independent training workflows, connecting task validation with UI, animation, audio and interactive 3D content.
- Modernise legacy simulation software and investigate faults across engine compatibility, hardware communication, application state, data persistence and reporting.
- Collaborate with subject-matter experts, developers, artists and designers to refine task sequencing, interaction feedback and application behaviour through prototyping and debugging.

Internship

Game Designer Intern, *AMMACHI Labs, Amrita Vishwa Vidyapeetham* 01/2025 – 06/2025
Kollam, Kerala

- Created storyboards, interaction flows, instructional sequences and voice-over scripts; supported Unity implementation and iterative refinement.
- Contributed to vocational simulations covering EV motor controllers, solar energy, CNC lathe operations, HydraFacial treatment and soybean processing.

Student Intern, *Bharat Sanchar Nigam Limited (BSNL)* 09/2023 – 10/2023
Thrissur, Kerala

- Practical exposure to telecommunications infrastructure, network maintenance and troubleshooting.

Machine Learning Intern, *Intrainz* 01/2023 – 03/2023
Remote

- Worked with Python on data preprocessing, classification, model training and evaluation.

Technical and Design Skills

Development:
C#, Unity; C++ and Blueprints for Unreal prototyping; Python.

Design:
Core loops, mechanics and rules, challenge progression, interaction feedback, procedural learning, prototyping, storyboarding and design documentation.

Gameplay and XR:
Photon Fusion 2, state machines, gameplay AI, interaction systems, XR Interaction Toolkit, OpenXR, Unity Visual Scripting.

Tools and Integration:
Git, GitHub, Visual Studio, Blender, Figma, SQLite, Windows named pipes.

Selected Projects

Move Your Butt — Multiplayer Party Game, *(RoA Interactive | 2026 | Unity, C#, Photon Fusion 2 | Four-person team | In development)*
- Co-design and develop a competitive team game in which players create wall openings for their opponents, combining pose selection, spatial positioning and alternating creator/passer roles.
- Co-develop shared-mode multiplayer gameplay, linking round-state coordination with a common wall mask for carving, collision and scoring.
- Contribute to gameplay systems spanning pose-planning bots, fuel-limited jumps, score-aware pickups and telegraphed hazards; pickup allocations compare completed round pairs to avoid unequal scoring opportunities.

CPR and AED Training Simulation, *(AMMACHI Labs | 2026 | Unity, C#, WebGL | Two developers)*
- Co-developed a third-person training experience combining patient assessment, CPR and AED procedures with guided instruction, independent assessment and compression practice.
- Integrated guided task gating and corrective feedback, distinguishing out-of-sequence actions from mistakes within a task so learners can recognise and correct errors.
- The architecture uses timestamped events to drive guidance, coaching and deterministic debrief scoring independently of presentation; a SCORM 2004 bridge implements learning-platform reporting.

Bar Bending Simulator — Legacy Modernization, *(AMMACHI Labs | 2026 modernisation | Unity, C#, SQLite | Two developers)*
- Modernised an inherited Unity 5-era industrial trainer, moving the project through engine upgrades to a maintained Unity 2019 LTS line.
- Diagnosed faults across the OPC/PLC named-pipe link, SQLite access and report-file handling, supporting an existing procedural-bending and trainee-reporting workflow.

Solar VR — Rooftop Solar Training, *(AMMACHI Labs | Unity, C#, Visual Scripting, OpenXR | Sole developer)*
- Developed a VR training exercise covering protective equipment, instrument checks, connector placement and solar-system wiring, combining spatial interactions with narrated procedural guidance.
- Implemented event-gated progression, snap interactions and spline-driven cables, coordinating virtual tool use with task completion and instructional UI.
- Built incorrect-connection feedback and retry behaviour so learners encounter consequences and repeat the relevant step rather than restart the entire exercise.

Madan: The Hope — Bus-Game Prototype, *(RoA Interactive | 2025 - 2026 | Unreal Engine 5, C++, Blueprints | Five-person team | Paused)*
- Co-developed first-person interaction and bus-driving foundations, combining reusable C++ interactables with Blueprint behaviour, Enhanced Input and Chaos Vehicles.
- Prototyped object highlighting, hold-to-interact feedback, physics-based carrying and the transition from walking to driving, with visible prompts and progress before consequential actions.

Certificates

C# Programming for Unity Game Development Specialization
January 2024 to February 2024

Coding for Everyone: C and C++ Specialization
October 2023 to January 2024

Google IT automation with python professional certificate
December 2022 to March 2023

Improve Your English Communication Skills Specialization
October 2023 to December 2023
